

## OUR CHALLENGE

In much of the developing world, governments and citizens lack crucial information regarding the “who, what, and where” of development assistance in their countries. This creates a challenge for development planning, management, and coordination, and discourages citizen engagement in decision-making processes that affect their livelihoods.

## WHO WE ARE

The Open Aid Partnership (OAP) is a global initiative of the World Bank that convenes donors, governments, and civil society to maximize the impact of aid-related resources and improve development outcomes. Its mission is to improve the supply of and demand for open aid data and build the capacity of relevant stakeholders to leverage it for enhanced and more collaborative planning, management, and coordination of aid-related decision making.

## WHAT WE DO

### CAPACITY BUILDING

OAP provides technical assistance and capacity building customized to the needs of stakeholder groups in partner countries by:

- ▶ Strengthening donor ability to disclose interoperable and disaggregated data in accordance with international standards and based on stakeholders’ information needs
- ▶ Supporting policymakers to integrate aid-related data into the planning, monitoring, and coordination of development assistance
- ▶ Building the capacity of civil society actors and journalists to extract, analyze, and use open data on development resources

### INNOVATIONS IN AID DATA DISCLOSURE

OAP convenes implementing partners around innovative approaches to collecting, aggregating, and using data on development resources, and combining it with budget, public investment, and procurement data. By enhancing the accessibility, comprehensiveness, and interoperability of development resource data, policymakers and citizens can then track investment resources down the entire chain of delivery, from the source of funding to the services rendered.

### MEASURING AND BOOSTING IMPACT

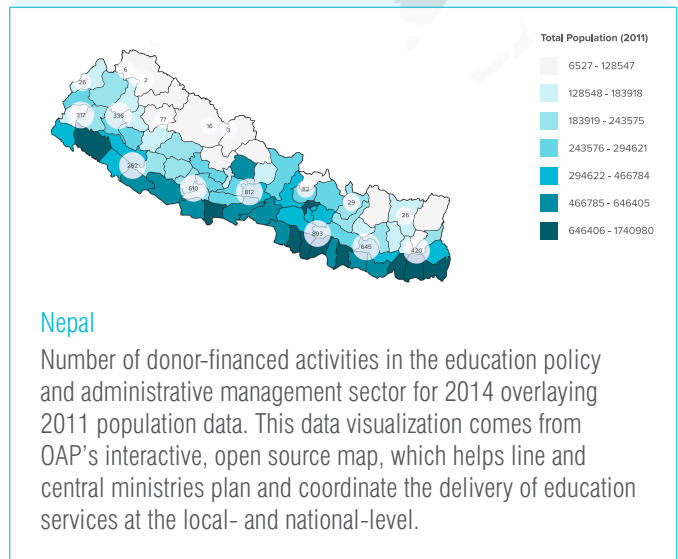

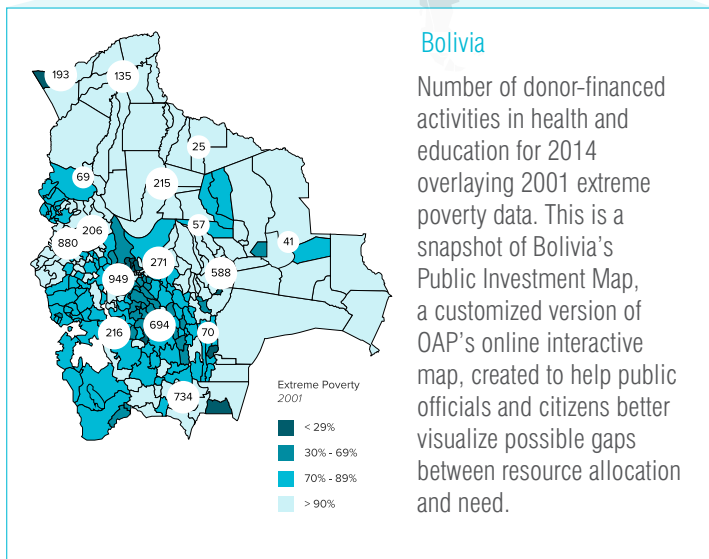

OAP systematically monitors and evaluates its engagements to maximize its impact. It also works to coalesce donors, governments, civil society, and other development actors around good practices by sharing lessons learned on aid data management.
